Priests for Life Spearheads Most Powerful Imagery of the Unborn Child

June 9, 2025

Dear Father/Deacon:

It's light years beyond ultrasound—and it will practically make you fall off your chair when you see it.

For decades now, we at Priests for Life have been promoting to every sector of the Church and the pro-life movement the most vivid, powerful, and striking videography of the unborn child that exists. This is not animation—it is direct videography of the child herself, obtained through a rarely used technique called **embryoscopy**, in which a video camera the size of a pen-point is inserted abdominally or cervically.

It is widely known in the pro-life movement that ultrasound imagery changes people's minds and hearts. With this stunning, color imagery of the child from four to twelve weeks after fertilization, there will be even more radical conversions—if more people commit to spreading this far and wide.

Clips from the full video - by the Education Resource Fund (**www.ERF.science**) - can be found at **www.ChildrenBeforeBirth.com**. There are videos of the heart beating at just 4 weeks (it begins at 21 days!).

The videos do not directly address the abortion issue, but they will certainly inoculate anyone from pro-abortion arguments. Along with the embryoscopy method, five other medical imaging technologies are used in the videos, accompanied by commentary on the scientific facts of the child's development.

The Education Resource Fund also offers stunning embryo and fetus images derived from many smaller images "stitched" together in much the same way NASA combines satellite photo "tiles" to form a large mosaic. These images as well as information on the "See Baby Grow" app, can be found **at www.ChildrenBeforeBirth.com**.

Please share this information with your congregation, school, parish pro-life group, via social media or in any way you can to spread the pro-life message.

Blessings,

Please fax this back to 321-225-8271

Pro-Life Leader Frank Pavone
